Lenni is graceful in every way. The way it handles, feels and quilts.

With Lenni, we have transferred the know-how of our bigger machines to a more compact size. It is the essence of APQS in its simplest, purest form – a fun and affordable longarm. Everything is designed, engineered and crafted to be approachable, inviting and simple to use.

What makes Lenni special?

Features that add exceptional value

Though Lenni is smaller in size, it's not short on quality. From its beautiful stitches to the way it glides across your quilt, you'll find the same attention to detail as in all our quilting machines. Lenni's compact footprint and simple controls make it ideal for home studios and powerful enough for professional quilters.

Front & rear multi-positional handles

Easily adjust Lenni's multi-position front and rear handles from both sides of the machine to fit you comfortably. The front handles are independently adjustable up and down while also featuring tilting hand grips to help you enjoy longer quilting sessions and avoid muscle strain. Their design provides great needle visibility and lets you quilt longer with less fatigue.

Standard Bliss™ Table

The APQS Standard Bliss Table comes in 8-, 10- and 12-foot lengths. No matter which size you choose, you'll enjoy time-saving features that make your quilting simple and fun. The quilt top, batting and backing all load from the top so you can easily change the bobbin, smooth out batting, or even sit as you quilt. Our tables do not have junction points in the rails, so that the machine glides smoothly across the entire quilt. Two simple compression brakes hold the rollers in place, allowing you to independently adjust each quilt layer for smooth quilts.

All machines come standard with our exclusive Bliss Track System. Specially designed horizontal wheels on the sewing head and roller bearings on the table rails provide smooth, effortless movement, allowing you to quilt for hours without feeling tired.

Available options for Lenni

- Quilt Path™ computerized quilting system
- Hydraulic table lift
- In-home set-up by factory-certified technician
